MANUAL RETRACTABLE SCREENS

CUT TO FIT PRODUCTS (KD)

The cut to fit doors are designed to provide our dealers with maximum flexibility to meet the most common single and double door applications. The single and double door kits (KD which stands for “knocked down”) are offered in two sizes to accommodate installations up to 84” and 98” maximum heights. The maximum width for a single door is 48” and the double door is 80”. For example, a dealer that purchases a Single 84” KD will be able to fabricate both a standard 79 ¾” , an 82” or any custom single door up to 84” high. Now you can inventory fewer types of doors and respond faster to a customers need for a retractable screen product. There are (4) standard colors.

THE WIND-BREAKER

The *Wind-Breaker* is a new product introduced at the NAHB builders show in January, 2006. It is the **only** retractable screen that won’t blow out in a moderate breeze (20MPH). It is available in all of our different products with a slight price increase. The bottom track is slightly higher (1”) than our regular product (11/16”) and will have its own threshold extrusions to accommodate the increased height. Any moderate wind applications such as waterfront, high rise, wind-tunnel effect, etc. should have the *Wind-Breaker*.

CUSTOM PRODUCT

For very little additional cost the Dreamscreen can be manufactured exactly to your size specifications and the (4) standard colors and (2) optional colors, or the color can custom matched to the customer requirement.

The Dreamscreen can be manufactured up to 10 ft. in height in 1/8” increments. The width can go up to 54” for the single door, 98” for the double door. Make your height and width requirements clear when ordering. Optional types of screen include 20 x 20 mesh (no-see-um screen) or sun screen/ solar screen. Call if there is a special requirement for your application.

STANDARD PRODUCT

The dreamscreen is unique because it offers two different standard door heights. The 79 ¾” height door accommodates both flush mounts (inside the door frame) and face mounts. The 79 ¾” height doors come with a UPVC extrusion “top seal” that, if needed, is trimmed to fit any gap between the top of the Dreamscreen and the header. A gap occurs if the existing door is taller than the standard 6’8” door or if the Dreamscreen is installed on the bottom of a step down sill or on the face of the door frame (see mounting diagrams for face mounting). The top seal can add up to 3 1/2” to the Dreamscreen door height. The standard Dreamscreen can easily be installed in applications where the entry door is shorter than 6’8”. Mobile home out-swinging doors are very often only 76” to 78” in height. Just face mount the 79 ¾” Dreamscreen (you may want to remove the molding prior to installation).

The standard 82” height is generally used to mount on the face of the door frame. The 82” height dreamscreen does not require a UPVC top seal but it is available if the dealer requests it.

The standard singles and standard double retractable doors can be installed easily without requiring pre-measuring.

The standard single door comes with (2) 46” guide rails (an upper and lower), therefore, the maximum door width is a 48” opening. The standard double door comes with (2) 80” guide rails (an upper and lower), therefore, the maximum door width is an 84” opening.

The standard screen is 18 x 14 mesh, vinyl coated, charcoal fiberglass but can be ordered as standard in gray color at no additional charge.

MOTORIZED OVERHEAD RETRACTABLE SCREENS

The Motorized screen is designed for large openings over 8 ft wide up to 25 ft wide, and up to 14 ft high. The screen is especially adaptable to garage doors, balconies, porches, lanais. The screens provide insect protection and/ or sunshading applications.

FUNCTIONAL VERSATILITY

- Remote controlled convenience is standard, opens & retracts with the touch of a button
- Provides insect free ventilation and enhances privacy with a variety of screen material options
- Rugged design features “Wind Bar” bracing technology to withstand high wind loads and impacts that will protect and extend the life of the screen material
- Screen lock design on edges withstands wind gust to 30MPH and if the screen does blow out of the track, just reset it by raising and lowering the screen with your remote! No Tearing!
- Limited life time warranty for your peace of mind (5 yr warranty on motor)
- Choice of four designer colors
-

SPECIFICATIONS

- Widths from 3 ft to 25 ft
- Heights up to 14 ft
- Powerful remote controlled motor.

OPTIONS

- Variety of screening and shading options to suit your needs
- Waterproof remotes and 4 channel remotes to control up to 5 screens
- Custom frame colors available to match your requirements
